Try our New Full-text Search Prototype **GO**[Help](#)

- 1) Enter keywords in one or more text boxes.
- 2) Select the fields to search for each keyword.
- 3) Select search operators when using multiple keywords.
- 4) Limit the results by selecting Search Options.
- 5) Click Search. See [Search Examples](#)

 In:

 In:

 In:

Note: This function returns plural and suffixed forms of the keyword(s).

Search Options:

Select publication types:

- ☒ IEEE Journals
- ☒ IEE Journals
- ☒ IEEE Conference proceedings
- ☒ IEE Conference proceedings
- ☒ IEEE Standards

Select years to search:

 From year: to

Organize search results by:

 Sort by:

 In: order

09/892,124

5,959,592 → looks good for claims 22+33.

These claims do not claim high or low pass filters.

filter 56 removes frequencies above 1450 Mhz (above the first channel) -
filter 70 removes frequencies below 1550 Mhz (below the second channel)
combined in 72.

~~Doesn't~~ circuit doesn't have a band pass filter after the combiner
but could be obvious for a number of reasons (remove unwanted
components) ~~Need~~ Need to find a secondary reference doing this though.

adjacent means: close to, lying near and I think this limitation is
satisfied since 1450 Mhz is close to 1550 Mhz.
